

The Positioning of Research Establishments

Transfer basic Knowledge into industrial applications by further developing and integrating technologies

Association of European Research Establishments in Aeronautics

Facts and Figures 2015

The association of European Research Establishments in Aeronautics (EREA) was created in 1994 to provide industry, operators and governments with a cost effective high quality aviation technology base through the coordinated use of capabilities, resources, personnel and facilities.

EREA is active in the field of civil, military and space related aviation.
